

Special Ability:
As one action, once per turn, swap a [loot!] card from your hand with one from the discard pile.

[forensics ninja]

Special Ability:
As one action, freely rotate a compromised node anywhere on the network.

[traffic spoofer]

- [intrusion detected]: Raise the [infocon] level.
- [honeypot audit]: Immediately draw a [patch!] card. If the pictured [node] is compromised, raise the [infocon] level.
- [check]: The hand limit is five cards. Every card in excess of the hand limit must be discarded. You may play [zero-day exploits] before discarding them.
- [patch] situations:
 - If a player is on a node being patched, she must [move] to a compromised node (obeying normal movement rules), then [decommission] the node and its [patch!] card.
 - Otherwise, the [node] is turned to its uncompromised side.
- [zero-day exploits] can be played by any player at any time:
 - for the listed effect, or
 - to prevent all [patch] effects, or
 - to reorient a compromised [node].

Special Ability:
As one action, [move] to any compromised node.

[social engineer]

Special Ability:
As one action, [move] across any number of compromised nodes that are connected by a path.

[malware writer]

Special Ability:
As one action, [give] or [exchange] two cards.

[botmaster]

Special Ability:
As one action, [move] to any adjacent compromised node, even if a path does not exist.

[cryptanalyst]

Special Ability:
As one action, [compromise] two adjacent nodes.

[the insider]

Special Ability:
As one action, [give] or [exchange] a card to a player anywhere on the network.

[war driver]

order of play

1. [action]

Take up to 3 actions:
[move], [compromise], [give],
[exchange], [recover]

2. [IoT!]

Draw 2 [IoT!] cards. Resolve
[intrusion detected] and
[honeypot audit] cards.

3. [patch!]

Draw and resolve [patch!] cards, as indicated by the
[infocon] level.

4. [check]

Discard, to obey the hand
limit.
